Q: Excel 2010 - Data Validation - validate data before saving I am currently using this great function for doing data validation: Sub validateData() With Range("A2:C9").Validation .Delete .Add Type:=xlValidateList, AlertStyle:=xlValidAlertStop, Operator:= _xlBetween, Formula1:="=A2:A9" .IgnoreBlank = True .InCellDropdown = True .InputTitle = "" .ErrorTitle = "" .InputMessage = "" .ErrorMessage = "" .ShowInput = True .ShowError = True End With End Sub However, it will only validate when the user is pressing a button to run the validation. Is there any way of having it automatically run without the user pressing a button? For example, have the macro run automatically upon saving? Thanks A: As mentioned you need to have button to run the code. I have a custom function that checks sheet format then saves the file as needed and will run validation in case required information is missing. Please note that for named ranges or columns that appear in a formula to work they need to be defined in the first row (even if they are defined to be used in other worksheets) =@areas() =@extract() =@extracts() =@advanced() =@units() =@mass() =@weight() =@stored() =@gauge() =@filler() =@sheet() =@length() =@volume() =@inactive() =@active() =@type() =@register() =@ranges() =@brick() =@bank() =@box() =@hydraulics() =@control() =@pipe() =@in()

What's New in the?

The Pen tool can be used for various drawing effects, including line art or text. The Pen brush automatically makes a selection before it paints, making it faster and easier to select areas of an image. The Rectangular Selection tool can be used to quickly select rectangular areas of an image for cropping or masking. The Magnetic Lasso tool can be used for making selections in your image. The Marquee Selection tool is useful for making free-form selections. You can use it to copy an image or select a portion of an image. The Hand tool is particularly useful when working with 3D objects or objects that are modeled using 3D graphics or 3D software. The Hand tool lets you manipulate objects in three dimensions without twisting your wrist or holding the mouse. The Magic Wand tool lets you easily select specific areas of your images. This tool also lets you do multiple selections simultaneously. The Selection Brush is especially useful for cropping images. It can also be used to make selections that are connected to the bottom left corner. The Eraser tool can be used to remove pixels or groups of pixels from an image. The Dodge tool can be used for removing unwanted artifacts from an image. The Blur tool can be used to blur the edges of your image. The Compose Patch tool can be used for arranging and grouping various commands. (Editor's note: The steps for these tutorials appear in Photoshop 7, 8 and 9, so if you are using a more recent version of the software, please read the tutorials before continuing. If you find a problem with an instruction, please contact the author or Photoshop.com for help with it. Thanks!) Photoshop is a powerful tool. Learning how to use it can be a difficult task. Some people learn fast and others take years before they've figured out all of the commands. The following tutorial will teach you how to use the different tools in Photoshop. Before you start, make sure you have the latest version of Photoshop installed on your computer. The tutorial you will learn today was written for Photoshop 7, so it assumes you're using Photoshop 7. If you don't have Photoshop 7, you will have to download and install it. Photoshop is one of the most popular graphics programs for image editing. It has both basic editing tools and powerful tools for more advanced image manipulation. For example, you can make Photoshop photos look like paintings
